

Centro Libre Clara Visión

Working Dossier 2015

Presentation

We've been frequenting the regions next to the Peru-Brasil-Bolivia border since 2006 and have observed many changes in peruvian territory. At the same time, we fell in love with the natural beauty and cultural riches of the area.

For this reason we feel the desire to inhabit this wonderful place, protect it, and take our research and development activities, as well as our work to promote *libre* technology, directly there, where it can have the highest environmental and social impact.

Having established alliances with groups and individuals in peruvian territory as well as on the brasilian and bolivian sides, we have decided to embark in this mission in 2015.

Goal

The establishment of a permaculture station, open to the public, where workshops can be held, and people/researchers can be hosted who are willing to share their knowledge with the community.

Specific goals

- Locate and acquire land
- Build a propotype «*Aula Libre*» (“Free Learning Space”)
- Build lodging and common areas
- Run workshops directed at the children and young people in the community
- Establish an Internet link
- Facilitate environmental monitoring both locally and internationally
- Facilitate cultural exchange

The «*Aula Libre*»

“Aula Libre” is a space designed for childrento and young adults, where they can have access to workshops offered by the resident researchers as well as guests to the center, wether they be local or international.

The “Aula Libre” will be equipped with tools, materials and equipment such that they allow this place to become the point where the community comes to resolve its inquiries as well as to work on projects oriented towards the common good.

Project Stages

Phase 0:

~~Acquisition of basic equipment to bring to Pto Maldonado~~

Fundraising / socializing of the project in Lima (May)

Establish temporary stay in Pto Maldonado city (June)

Phase 1:

Acquisition of the land

Design the distribution of space and the territory

Establish sites for common areas, orchard

Build housing and Aula Libre

Phase 2:

Start production at the orchard

Establishment of pathways for environmental monitoring

Workshops and Activities

Researchers who are proposing the Centro Libre Clara Visión, are in capacity of establishing, immediately upon arrival, workshops about:

“Artisanship in Videogame Development”

“Basics in Graphical Design and Layout”

“Digital Communications”

“Administration of Internet Servers”

“Translate your Software to your own Language”

“Photovoltaic Systems”

“Karate Do”

We are also interested in offering workshops by experts in:

“Permaculture a and Productive Forests”

“Ecological Construction”

“Mapping and Environmental Monitoring”

“Educación Vivencial” (Experiential Education)

“Medicine Music”
